## Term Test-II

Course: MAT 103BM Time:35 mins Marks: 10

Q1. State Leibnitz's theorem. If 
$$y = a \cos(lnx) + b \sin(lnx)$$
, then show that

 $r^2v = \pm (2n \pm 1)rv = \pm (n^2 \pm 1)v = 0$ 

$$x^{2}y_{n+2} + (2n+1)xy_{n+1} + (n^{2} + 1)y_{n} = 0.$$

Q2. Define local and absolute extreme values. Find the absolute extrema of  $f(x) = x^{2/3}$  on [-2, 3].
